

BASIC POOL CARE

- Test your pool water weekly.
- Maintain pH between 7.2 – 7.8.
- Maintain alkalinity between 80 – 120 for chlorine pools and 60 – 120 for copper pools.
- Maintain a chlorine level of 1.0 – 3.0.
- If on Copper program, maintain a copper level of .9–1.0
- Calcium hardness should be between 200 – 400.
- Lower pH and alkalinity with muriatic acid; raise them with alkalinity increaser.
- Always give your water 24 hours of circulation before re-testing the water or adding more chemicals.
- Vacuum your pool once / week.
- Backwash and rinse your pool filter every 2 weeks.
- We recommend adding Filter Aid to your filter after each backwash / rinse cycle.
- Shock your pool once per week.
- Add algaecide once per week – following the instructions on the bottle.
