

CHLORINE POOL OPENING INSTRUCTIONS

- Clean off the pool cover, remove the cover from the pool and allow to dry before folding and putting away.
- Hook up all hoses. Put the drain plug back in the pump and reinstall pump. Put the drain cap back on the filter and turn the multi-port valve back to the 'filter' position.
- Fill the pool to the correct water level. Unplug the skimmer and return jets and backwash and rinse the sand filter.
- Vacuum any debris off the pool bottom, then backwash and rinse the filter again.
- Test your cyanuric acid level first – if needed, drain water and refill to lower cyanuric levels.
- Wait 24 hours before testing and balancing your water –you may need pH Reducer, Alkalinity Increaser, or Muriatic Acid. ***Remember, we offer free water testing in the store****
- Once your pH and Alkalinity are balanced (7.2 – 7.6 and 80 – 120 respectively), add 1/2 – 1 bottle of Pool Magic Spring & Fall and 1/2 – 1 bottle of Combat 60, depending on the size of your pool, in the morning.
- That evening, test your chlorine level and fill your chlorinator with chlorine tabs. Re-test your cyanuric level and add stabilizer if needed. Add 1–3 bags of chlorine shock depending on the size of your pool.
- Let all chemicals 'Filter' with your pump on high overnight –test and adjust as needed.
