

HOT TUB PURGE

1. Open hot tub cover and set temperature to 95 degrees.
2. Remove filter cartridge.
3. Add entire bottle of Natural Chemistry Spa Purge while jets are running.
4. Run jets for a minimum of 5 minutes. Some foaming is expected during the purge process – if foaming becomes excessive, turn jets off.
5. Maintain water temperature at 95 degrees and allow hot tub to circulate overnight with the jets off.
6. Drain the hot tub and rinse/clean all hot tub surfaces.
7. Refill the hot tub and replace the filter cartridge.
8. Allow water to circulate for 24 hours.
9. Test and balance your hot tub water accordingly.
